

Duty of Life

Small actions. Lighter footprints. Bigger change.

Problem:

- To reduce Carbon Footprints for the betterment of mother nature using a digital application which serves as an interface and inspiration for many.

What is Carbon Footprint?

- A carbon footprint is the **total amount of greenhouse gases** (mainly carbon dioxide – CO₂) produced directly or indirectly by a person, organization, or activity.
- It is generated through activities like:
 - Transportation (cars, flights)
 - Electricity consumption

- **Who is affected?**

Students, professionals, households, and communities whose everyday lifestyle choices contribute to carbon emissions, often without realizing their environmental impact.

- **What is the cost?**

Rising carbon emissions leading to climate change, environmental degradation, pollution, and long-term risks to ecosystems and human health.

- **Key pain points:**

- Lack of awareness about personal carbon footprint
- No simple tools to measure and track environmental impact
- Difficulty maintaining sustainable habits and long-term records
- Limited motivation and community engagement for eco-friendly actions

Duty of Life

← Our Sol!

How Duty of Life Helps People

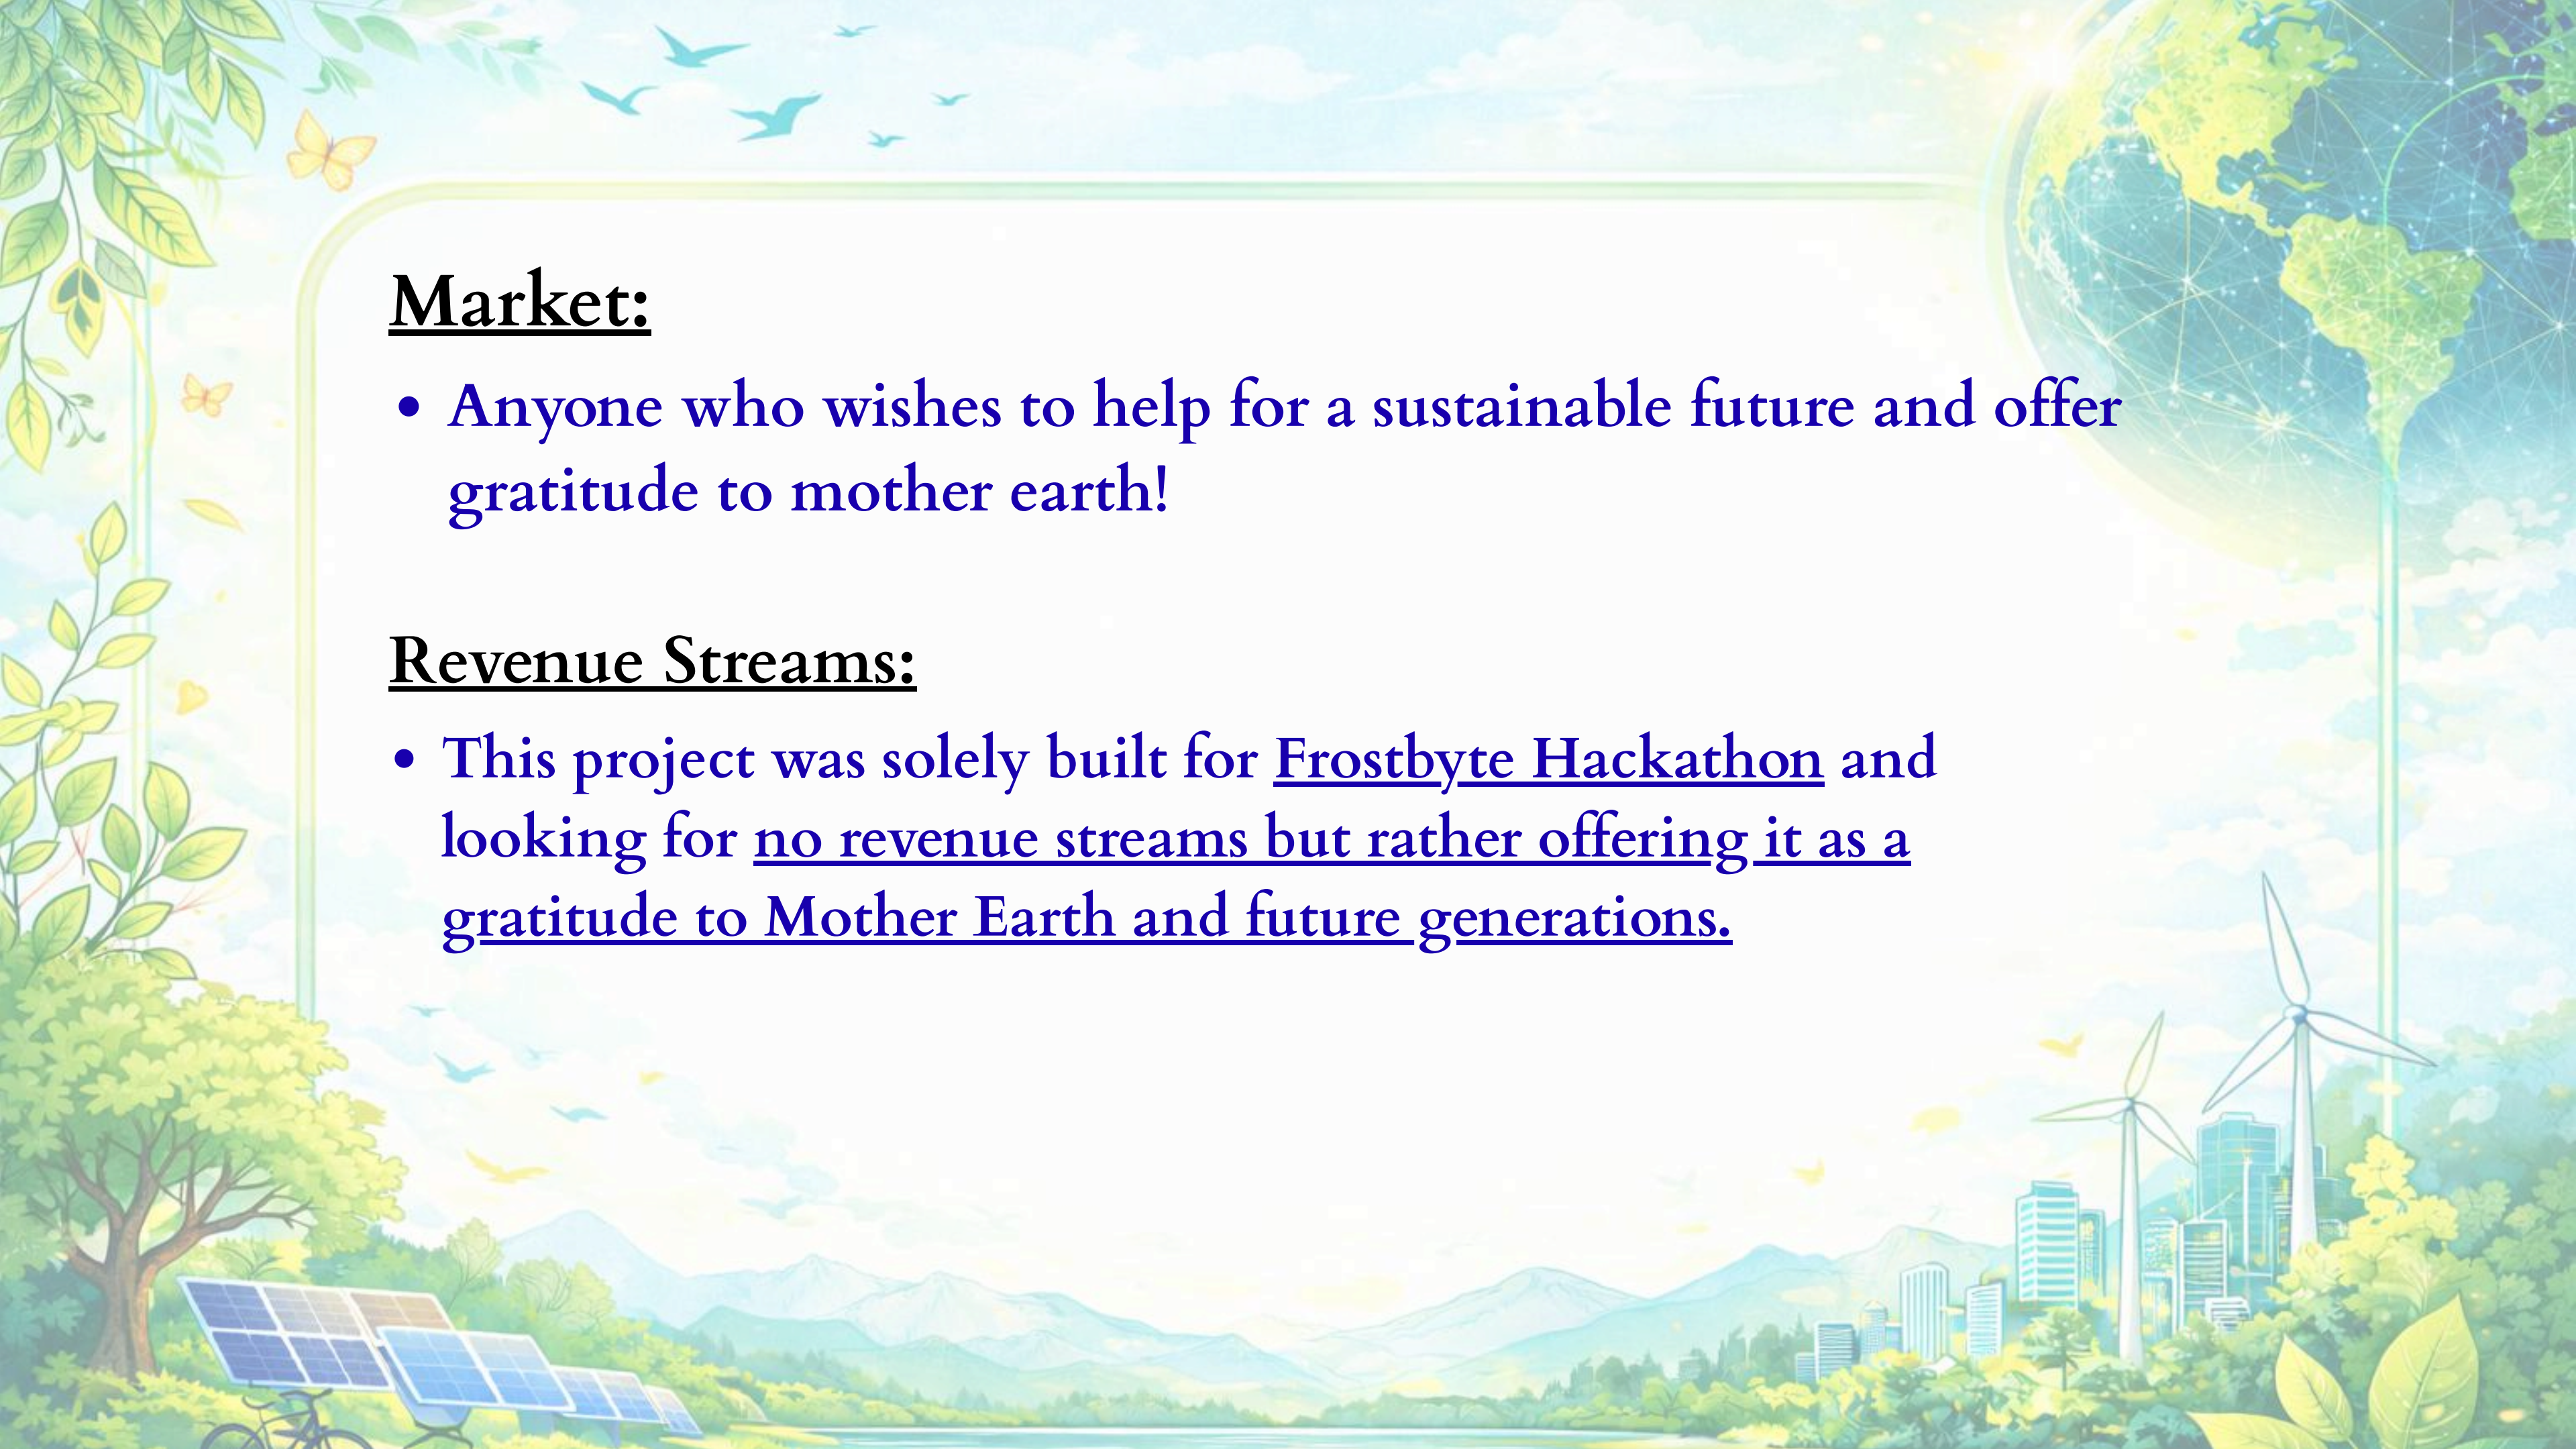

- See Your Impact: Shows how everyday actions like travel, electricity use, and lifestyle habits contribute to your carbon footprint.
- Make Better Choices: Provides simple sustainability tips and greener alternatives to help reduce emissions.
- Stay Motivated Together: Community challenges and leaderboards encourage people to build eco-friendly habits collectively.
- Create Real Change: Users can offset emissions by planting trees and track the positive impact they make for the planet. 🌱

Value to Users

- Helps people understand their environmental impact and make more responsible everyday choices.
- Keeps users motivated through challenges, recognition, and community participation.
- Enables individuals and organizations to track their sustainability progress over time. 🌱

Impact & Feasibility

- Encourages collective climate action through measurable individual efforts.
- Technically feasible today using MERN stack, analytics, and sustainability data models.
- Scalable for individual users, campuses, NGOs, and CSR programs.

Market:

- Anyone who wishes to help for a sustainable future and offer gratitude to mother earth!

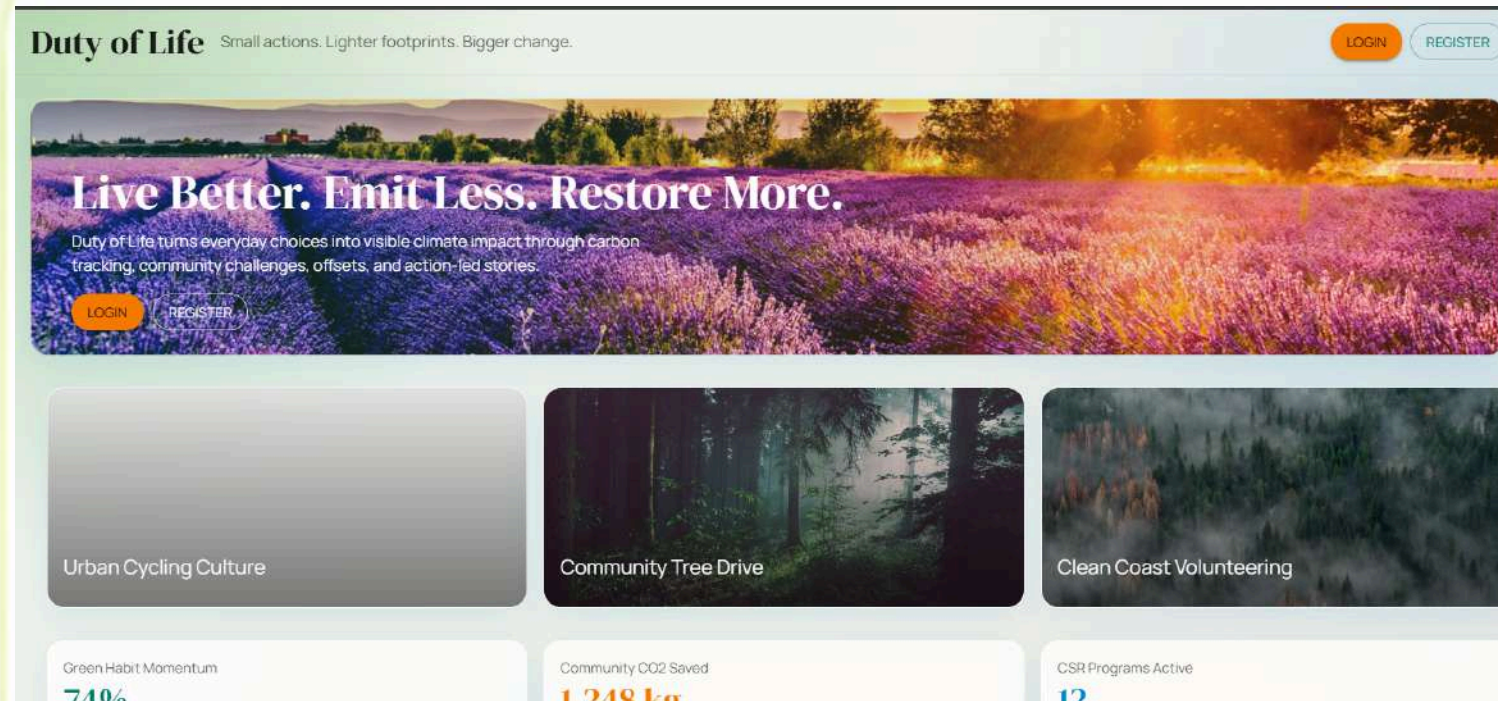

Revenue Streams:

- This project was solely built for Frostbyte Hackathon and looking for no revenue streams but rather offering it as a gratitude to Mother Earth and future generations.

Features

Homepage

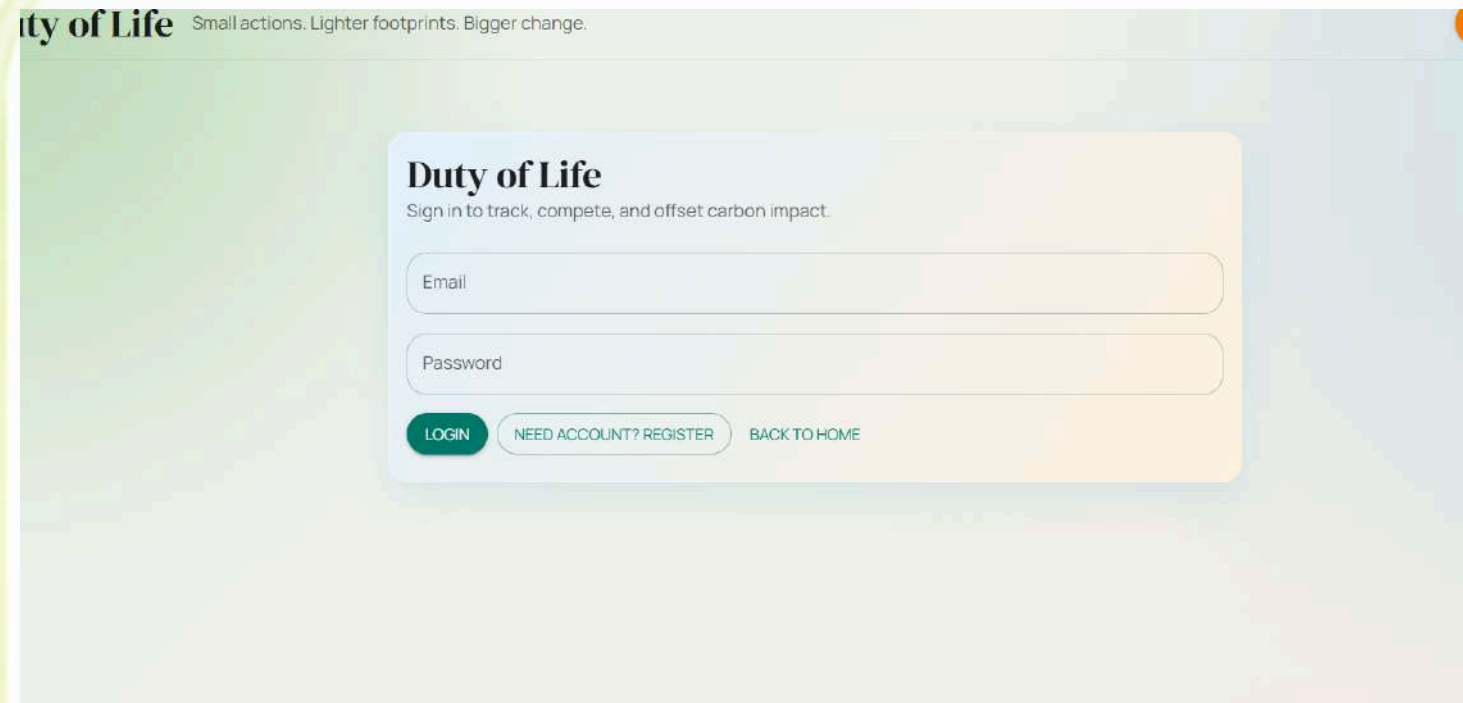

- The Home page is the public entry point to Duty of Life. It introduces the platform, showcases its sustainability vision, and gives visitors a quick look at what the product offers. From here, users can easily sign up or log in to start their journey toward more sustainable living.

Register Page

- The Register page allows new users to join the Duty of Life platform and begin their sustainability journey. Users create an account by entering basic details such as name, email, and password

A screenshot of the Duty of Life Register page. The header features the logo "Duty of Life" with the tagline "Small actions. Lighter footprints. Bigger change." and "LOGIN" and "REGISTER" buttons. The main content area has a light blue background with the text "Duty of Life" and "Sign in to track, compete, and offset carbon impact." Below this are four input fields: "Name", "Email", "Password", and "Role" (a dropdown menu with "USER" selected). At the bottom are three buttons: "CREATE ACCOUNT", "HAVE ACCOUNT? LOGIN", and "BACK TO HOME".

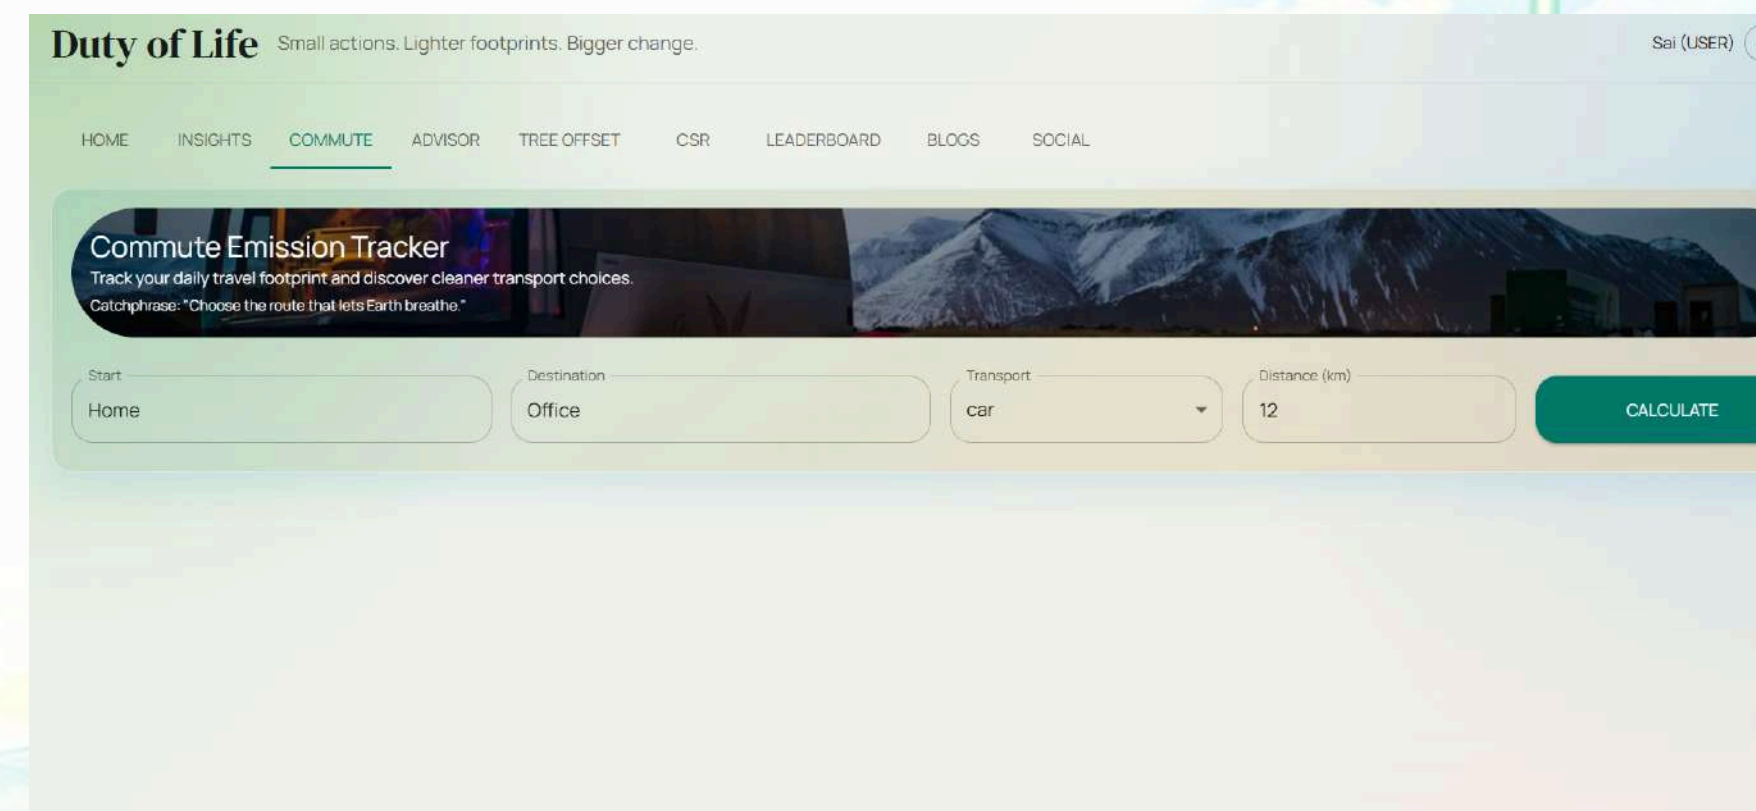

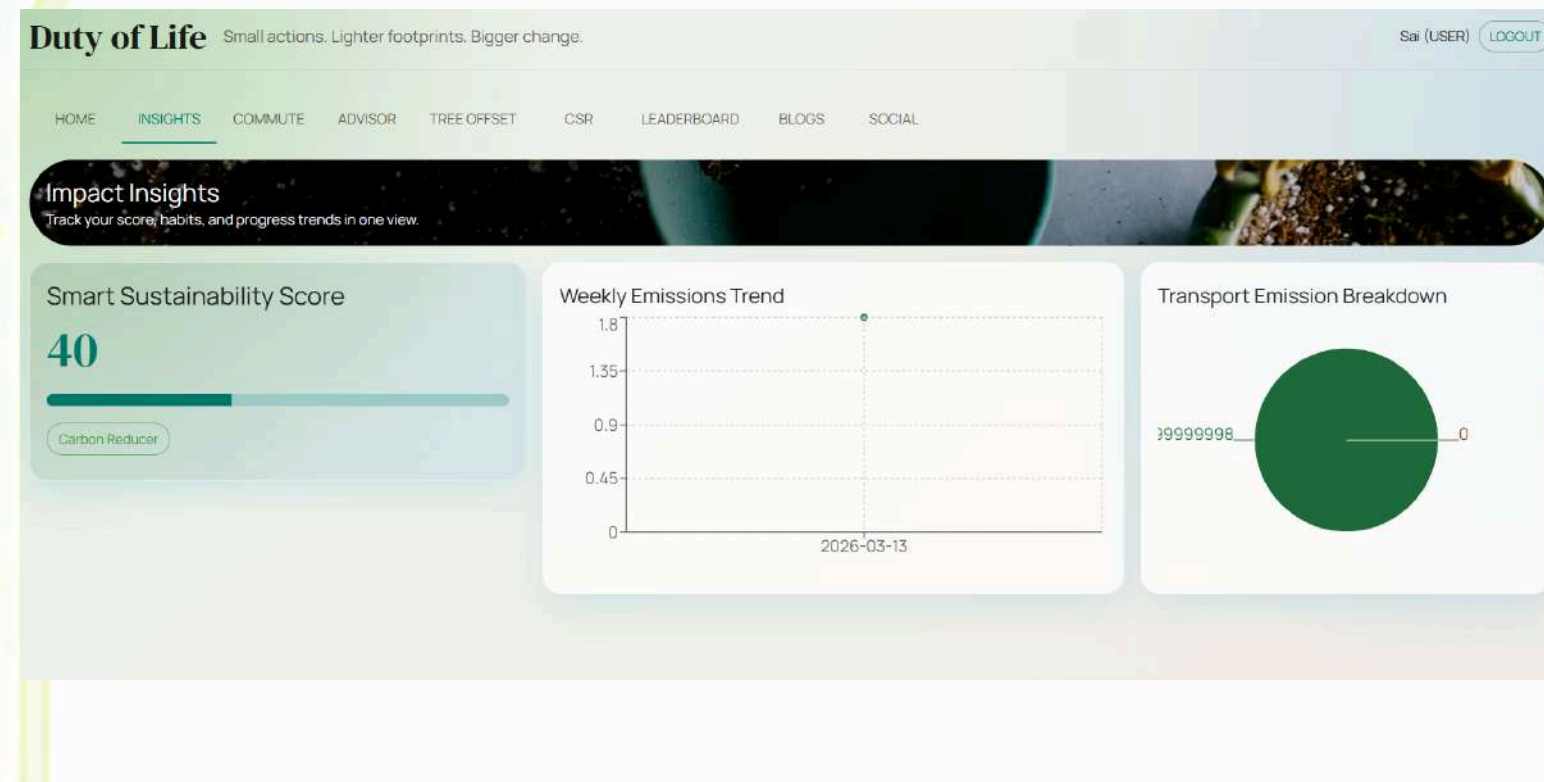

Login Page

- The Login page allows existing users to securely access their Duty of Life account. By entering their registered email and password, users can log in and continue tracking their sustainability progress, view insights, participate in challenges, and interact with the community.

Commute

- The Commute page helps users measure the carbon emissions from their daily travel. By entering route details, transport type, and distance, the platform calculates the CO₂ impact and suggests greener travel alternatives when possible.

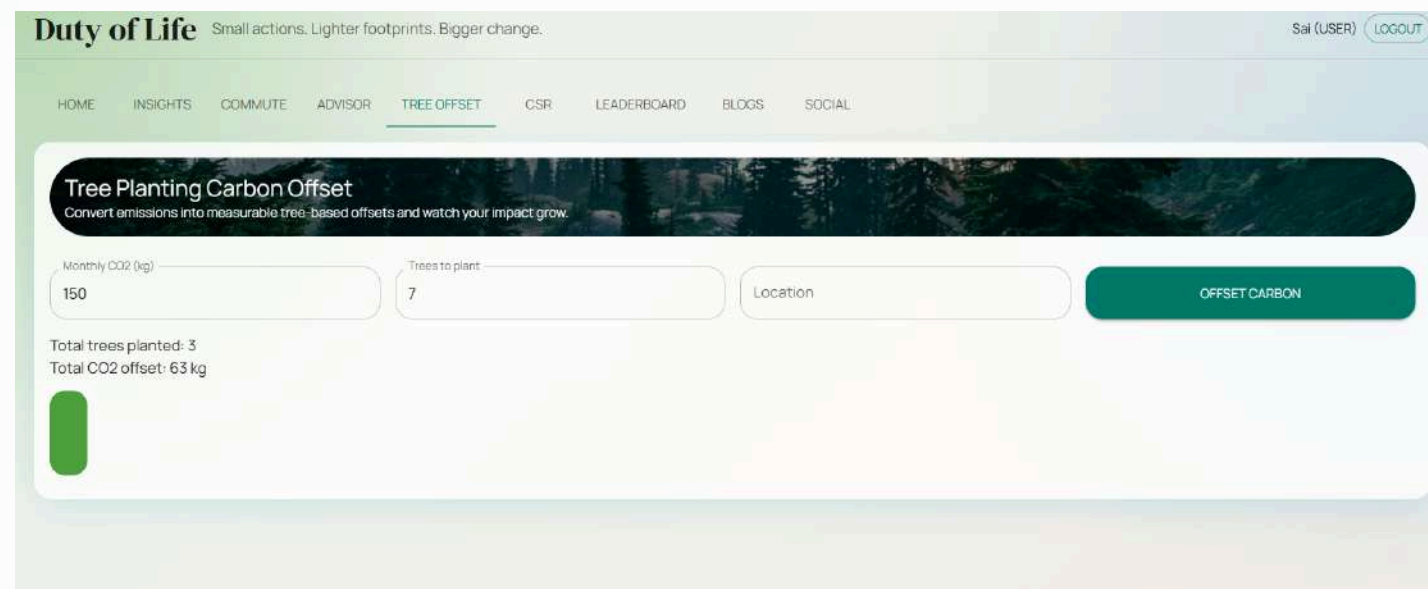

Insights

- Insights acts as the user's personal sustainability dashboard. It displays the smart sustainability score, earned badges, and visual analytics so users can clearly see their environmental impact and track their progress over time.

Advisor

- Advisor provides personalized sustainability tips based on the user's lifestyle habits such as travel patterns, electricity consumption, and food choices. It helps users understand practical ways to reduce their carbon footprint.

Tree Planting Carbon Offset

Convert emissions into measurable tree-based offsets and watch your impact grow.

Monthly CO2 (kg) 150 Trees to plant 7 Location OFFSET CARBON

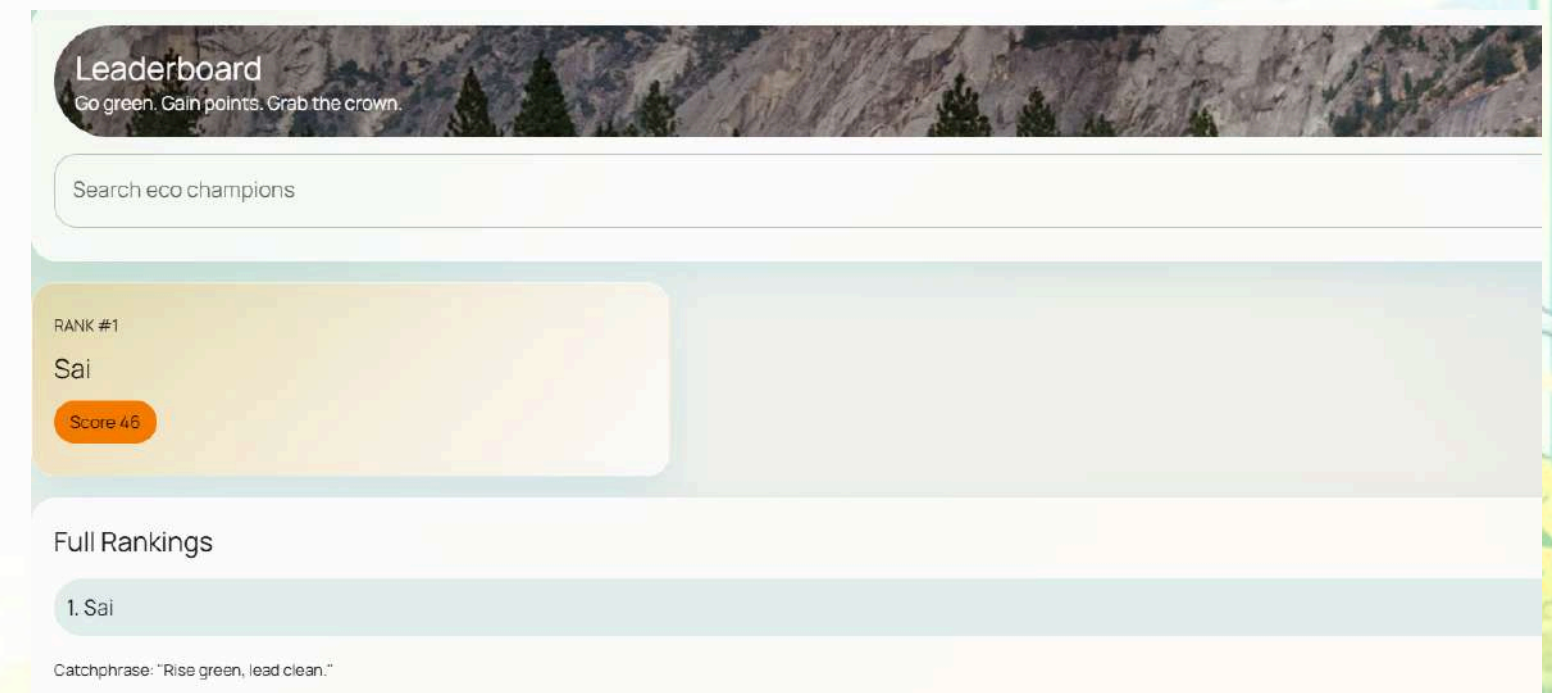

Total trees planted: 3
Total CO2 offset: 63 kg

Tree Offset

- The Tree Offset page allows users to balance their emissions through tree planting. It shows how many trees are needed to offset their carbon output and tracks their contribution toward carbon neutrality.

Leaderboard

- The Leaderboard highlights top contributors based on sustainability scores. It adds a fun and competitive element by encouraging users to improve their eco-friendly actions and climb the rankings.
